

Week 8 Research
Nick Souvannalay

Some interesting facts I learned while doing research on MySQL is:

1. The maximum size of a row in a MySQL table is 65,535 bytes.
2. The maximum value of Signed Integer is 2,147,483,647.
3. The maximum value of Unsigned Integer is 4,294,967,295.

I found the maximum value of the integers interesting because they are extremely large numbers. My favorite this I learned this week was using Draw.io. I had a hard time understanding relationships and how they worked, but once I saw and learned how the tables work it started making a lot more sense. It was fun creating the tables and I felt it really helped me learn the concept a lot better by having a visual.
